iPS cell therapy

We offer the ultimate in reverse aging.

Your own cells can be regenerated to their purest state and then administered. The ultimate in regenerative medicine is here.

CONCEPT

Regenerative medicine uses the power of newborn cells to rebuild skin and bodily functions weakened by aging and stress.

Tokyo Sophia Regenerative Clinic combines cutting-edge technology with medical knowledge to bring out essential beauty and health from the cellular level.

Tokyo Sophia Regeneration Clinic Executive Chief Doctor

Goutaro Kojima, M.D., Ph.D.

Regenerative medicine is no longer a privilege for a select few; we have entered an era in which true beauty and health can be restored using "your own cells." The stem cell therapy we offer is a proven approach based on medical evidence, and is "next-generation medicine" that will bring innovation to the field of aesthetic medicine.

We offer treatments that are tailored to each individual's life at Tokyo Sophia Regeneration Clinic.

-
- Graduated from the Faculty of Medicine at the University of Tokyo
 - Plastic surgery at the University Hospital
 - Trained mainly in regenerative medicine
 - Engaged in stem cell research at the Institute of Cell Biology at the University of California, San Diego (UCSD)
 - Supervised numerous regenerative medicine projects as the doctor in charge of a Ministry of Health, Labor and Welfare-certified regenerative medicine provider
 - Treatment of over thousands of cases at one of Japan's leading stem cell treatment clinics
 - To be appointed executive chief doctor of Tokyo Sophia Regenerative Clinic from 2023

TREATMENT

"Regenerative medicine"
uses one's own cells to enhance the body's natural healing powers.

Regenerative medicine is cutting-edge medical treatment that harnesses the natural healing power that exists within everyone. Because it uses your own stem cells, it is highly safe and does not cause side effects such as allergies or rejection reactions.

iPS Cell Therapy × iPS Private Bank

Next-generation medical treatment that "initializes" your own cells.

"Choice of medical care" starting with cutting-edge treatment

iPS cell therapy is the next generation of regenerative medicine that reprograms your own cells to their "newborn" state and returns them to your body in their purest and most innocent state. It enables natural rejuvenation and recovery without rejection. This is a unique approach that cannot be achieved by any other regenerative therapy.

At iPS Private Bank,
we reverse engineer your own cells to the purest state they were in immediately after birth,
and store them in a private bank in a state where they can be used at any time.
This treatment is only available at a limited number of institutions in Japan that are
approved by iPeace.

Carefully selected regenerative medicine that can only be performed by a limited number of institutions in Japan.

02

The cells used for administration are GMP compliant, completely free of impurities, and managed with a high exosome concentration.

04

A completely private schedule ensures privacy and reliability.

01

Our hospital has an official partnership with iPeace, an iPS therapy research lab that boasts the world's highest standards in cell processing technology.

03

Treatment design is planned jointly by the hospital's team of physicians and affiliated cell researchers.

05

After treatment, you will be provided with a cell status certificate and a result report.

iPS Private Bank

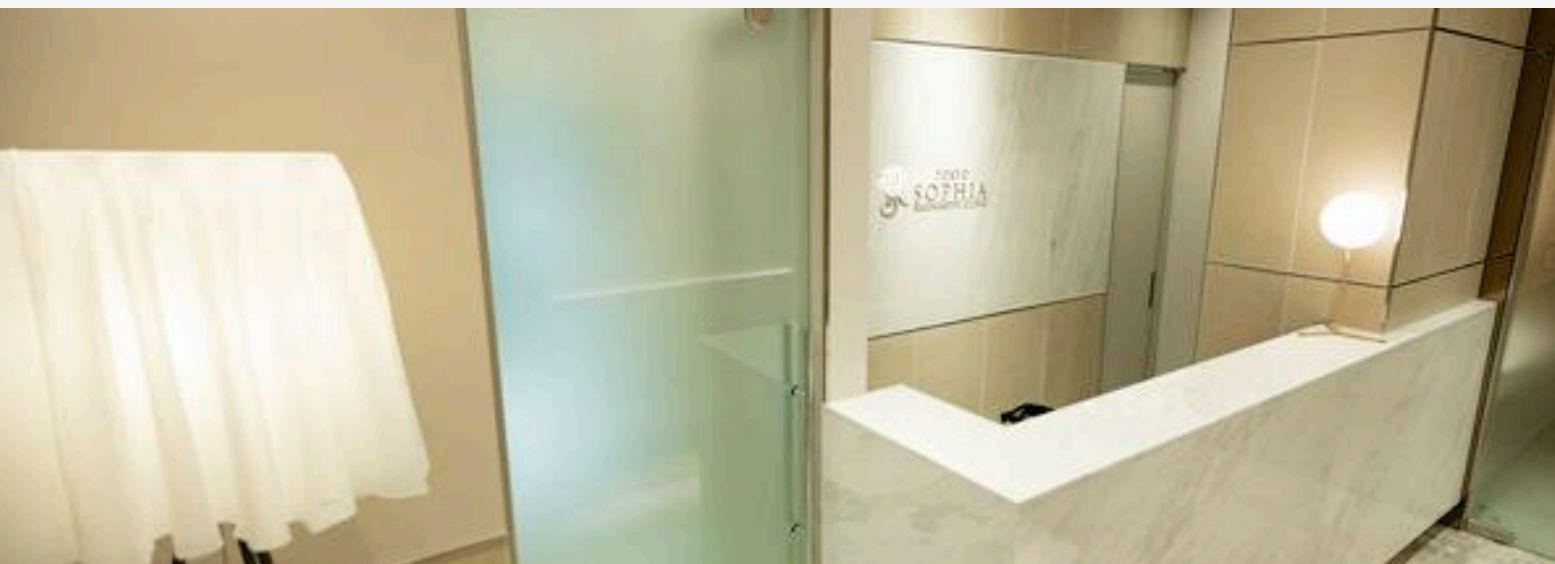

Your cells are reversed to their purest state and stored.
Your own iPS cells are provided to a research facility and stored in a private bank.
They are frozen at -80 degrees. If you ever need treatment,
you can receive treatment using your own stored iPS cells.

FIRST

At our clinic, we operate by a reservation-only system so that you can spend a peaceful and comfortable time with us.

We have posted information about the process from booking to treatment, our safety considerations, the features of our clinic, frequently asked questions, and more.
